BROKER DISCOVERY SCRIPT (PRINT VERSION)

Section 1 — Current Workflow

1. How many shipments do you handle per day (approx)?
2. For one shipment, what documents are required before billing?
3. After delivery, how does the POD reach you?
4. Who sends it — driver directly or through trucker?
5. In what format do you usually receive it? (Photo / PDF / Scan)

6. Where do you store it after receiving? (WhatsApp / Phone / Laptop / Folder)
 7. Before sending to client, do you review it manually?
 8. On average, how many follow-ups do you do per day for POD?
 9. From delivery to invoice, how many days does it usually take?
 10. What causes delay most often?
-

Section 2 — Pain Discovery

11. In last 7 days, did any POD need re-sending?
 12. What were the reasons? (Blur / Missing stamp / Wrong LR / Late upload)
 13. Has any POD ever been lost in WhatsApp chat?
 14. If client disputes a POD after 60–90 days, how do you retrieve it?
 15. Have you ever sent wrong POD to wrong client?
 16. Do drivers sometimes send multiple photos for same shipment?
 17. Do you ever receive POD without shipment reference mentioned clearly?
 18. Do you track which trucker still hasn't submitted POD?
 19. How do you know all documents are complete for billing?
 20. What is the most irritating document-related issue you faced recently?
-

Section 3 — Quantification

21. If billing is delayed by 1–2 days, does it affect your cash flow?
 22. Roughly how many hours per day go into document follow-up?
 23. If document intake became structured and searchable, would that help?
 24. Would faster document closure improve client satisfaction?
 25. If POD collection became standardized for all truckers, would that reduce chaos?
-

Stop after this.

Do not oversell.

Let them talk.

WHAT TO DRAW ON PAPER

Draw this clearly with arrows.

OLD FLOW (Detailed Context Version)

1. Driver delivers goods
2. Driver takes photo of signed POD
3. Driver sends photo on WhatsApp
- ↓
4. Trucker/Broker checks image
- ↓
5. If unclear → Follow-up call
- ↓
6. Driver resends
- ↓
7. Image forwarded to client
- ↓
8. Invoice prepared
- ↓
9. Payment cycle starts

Problems inside OLD flow:

- No structured tagging
 - No shipment-level grouping
 - Hard to retrieve later
 - Mixed in chat threads
 - Manual follow-up required
-

NEW FLOW (With Context Added)

1. Driver delivers goods
2. Driver opens Delivery in app
3. Selects document type → POD
4. Captures image inside app
5. Image auto-processed (crop + enhance)
- ↓
6. Uploaded to Delivery
- ↓

7. Trucker sees structured shipment view
↓
8. Trucker clicks “Share to Assignment”
↓
9. Broker sees clean POD under that shipment
↓
10. Invoice prepared
↓
11. Payment cycle starts

Key structural differences:

- Document tagged by shipment
- Document typed (POD / Invoice / Challan)
- Stored centrally
- Searchable later
- Review before forwarding
- No chat-based mixing

ONE LINE YOU SAY AFTER DRAWING

After showing both flows, say only:

“We are not changing how you operate. We are only making document intake structured instead of chat-based.”

Then stop talking.

BROKER HARD OBJECTION – QUICK RESPONSE SHEET

1 “We don’t have blur issues.
WhatsApp works fine.”

Response:

- Blur is not the main issue.
- Structure and retrieval are.
- After 60 days, can you find a POD in under 30 seconds?
- This solves search and tracking, not just clarity.

Stop.

2 “Drivers won’t use another app.”

Response:

- Driver only does 3 things:
 1. Scan QR
 2. Select POD
 3. Click photo
 - No typing.
 - No forms.
 - Takes less time than WhatsApp.
-

3 “My truckers already handle this.”

Response:

- Exactly.
 - We don’t bypass truckers.
 - They still review and share.
 - We only structure the flow between driver → trucker → you.
-

4 “This sounds complicated.”

Response:

Draw:

OLD → 6 manual steps NEW → 3 structured steps

Then say:

- Same process.
 - Fewer follow-ups.
 - Less chaos.
-

5 “What if driver uploads wrong document?”

Response:

- Nothing is auto-shared.
- Trucker must manually click “Share.”
- You only see reviewed documents.

Authority stays intact.

6 “WhatsApp is free. Why should I pay?”

Response:

- WhatsApp is free.
- Follow-ups are not.
- Delay in billing is not.
- Lost documents are not.

Pause.

7 “We rarely lose documents.”

Response:

- Good.
 - Then this ensures you *never* lose them.
 - And makes retrieval instant during disputes.
-

8 “My staff already manages this.”

Response:

- This doesn't remove staff.
 - It reduces their daily follow-up workload.
 - They focus on billing instead of chasing POD.
-

9 “We already have a TMS.”

Response:

- We are not replacing TMS.
 - We solve only document intake.
 - Structured capture layer.
 - Can integrate later.
-

10 “If image is blurred, I'll still reject it.”

Response:

- Correct.
 - But now rejection happens inside system.
 - Not through 5 phone calls and 3 forwards.
-

11 “What if internet is poor?”

Response:

- Driver captures offline.
 - Uploads when network returns.
 - No dependency on live signal.
-

1 2 “This won’t change my payment cycle.”

Response:

- Faster POD closure → Faster invoice.
 - Faster invoice → Earlier payment trigger.
 - We compress document delay, not payment terms.
-

1 3 “This is unnecessary.”

Response:

- Maybe.
- How many follow-up calls did you make yesterday?

Let them answer.

Emergency Closing Line (If They Stay Defensive)

Say only:

“If document flow is already smooth, you don’t need us. But if follow-ups and retrieval consume time, we fix that.”

Then stop.

Silence works.
