Professional Summary

React-first Full Stack Engineer with 2.8+ years of experience building production SaaS applications using React, TypeScript, Redux Toolkit, RTK Query, React Native, ASP.NET Core, EF Core, SQL, and Azure DevOps. Experienced in end-to-end feature delivery across frontend dashboards, mobile apps, backend APIs, authentication, database workflows, CI/CD, and production support. Strongest in frontend and mobile engineering with practical backend experience in .NET-based product systems.

Technical Skills

Frontend: React 18, TypeScript, Redux Toolkit, RTK Query, React Router, Vite, AG Grid, Chart.js, FullCalendar, i18next

Mobile: React Native, TypeScript, React Navigation, Firebase Cloud Messaging, APNS, Geolocation, Offline Sync

Backend: ASP.NET Core, .NET 8, EF Core, REST APIs, JWT Authentication, LINQ, Hangfire

Database: SQL Server, PostgreSQL, Query Optimization, Indexing, Transactions

Architecture: Clean Architecture, SOLID, Modular Monolith, Multi-Tenant SaaS, Reusable Components

DevOps: Azure DevOps Pipelines, Azure Static Web Apps, Azure App Services, Docker, CI/CD

Testing: Vitest, Jest, React Testing Library, xUnit, Integration Testing

Tools: Git, npm, ESLint, Prettier, Swagger Codegen

Experience

Software Engineer — In Time Tec, Jaipur

Jan 2024 – Present

Feedlot Manager Platform — React, TypeScript, ASP.NET Core, EF Core, Azure

- Contributed to a multi-tenant SaaS platform with web, mobile, and backend modules for agricultural operations.
- Built React dashboards and domain-specific frontend modules using React 18, TypeScript, Redux Toolkit, RTK Query, and AG Grid.
- Implemented 70+ RTK Query endpoints for type-safe API integration, caching, automated refetching, and frontend/backend data flow.
- Built reusable hooks, form abstractions, and UI components to reduce repeated frontend logic and improve maintainability.
- Optimized large data grids using memoization, lazy loading, pagination, and virtualization.
- Developed and integrated REST APIs using ASP.NET Core, EF Core, authentication, validation, and structured error handling.
- Worked with SQL Server/PostgreSQL queries, indexing, and EF Core optimization to improve backend response times.
- Contributed to Azure DevOps CI/CD pipelines for automated testing, linting, staging, and production deployments.

Roll On Dispatch Platform — React, React Native, ASP.NET Core, SQL Server

- Developed logistics platform features across web, mobile, and backend systems for dispatch and driver workflows.
- Built frontend modules including shipment builder, load board, driver management, carrier workflows, and operational dashboards.
- Integrated Google Maps route visualization and location-based workflows for dispatch operations.
- Built React Native mobile app features for 500+ drivers including GPS tracking, job workflows, push notifications, and offline sync.
- Integrated Firebase Cloud Messaging, APNS, secure token storage, geolocation, document scanning, and image compression.
- Developed backend APIs supporting shipments, drivers, mobile synchronization, authentication, and operational data flows.
- Handled async workflows, transactional consistency, and API contract coordination between web and mobile clients.
- Implemented export functionality for PDF, Excel, and CSV reports used in operational workflows.

Selected Achievements

- Built and supported product features used by 500+ active users/drivers across logistics and SaaS platforms.
- Reduced manual frontend API integration effort by implementing 70+ RTK Query endpoints and reusable API patterns.
- Improved UI performance for large datasets using memoization, virtualization, lazy loading, and optimized rendering patterns.
- Contributed across frontend, mobile, backend, testing, and deployment pipelines in production product environments.

Education

Bachelor of Technology in Computer Science and Engineering

2020 – 2024

Rajasthan Technical University, Jaipur

CGPA: 9.6/10
