Professional Summary

Backend-focused .NET Developer with 2.5+ years of software engineering experience and hands-on work building backend services for multi-tenant SaaS, logistics, and operational platforms. Skilled in ASP.NET Core, EF Core, SQL Server, PostgreSQL, REST APIs, JWT authentication, role-based authorization, background jobs, clean architecture, CI/CD pipelines, logging, and performance optimization. Strong interest in backend/product engineering roles with focus on scalable APIs, database reliability, and production-grade systems.

Technical Skills

Languages: C#, SQL, JavaScript, TypeScript

Backend: ASP.NET Core, .NET 8, Web API, EF Core, LINQ, Async/Await, REST APIs, Hangfire

Database: SQL Server, PostgreSQL, Query Optimization, Indexing, Stored Procedures, Transactions

Architecture: Clean Architecture, SOLID, Dependency Injection, Modular Monolith, Multi-Tenant SaaS Design

Security: JWT Authentication, OAuth, Role-Based Authorization, Token Refresh, Secure API Design

Cloud/DevOps: Azure DevOps Pipelines, Azure App Services, Azure SQL, Docker, CI/CD

Testing: xUnit, NUnit, Unit Testing, Integration Testing

Observability: Serilog, Azure Application Insights, Structured Logging, Monitoring

Frontend Exposure: React, TypeScript, Redux Toolkit

Experience

Software Developer — In Time Tec, Jaipur

Jan 2024 – Present

ASP.NET Core, EF Core, SQL Server, PostgreSQL, Azure, Docker, Hangfire

- Built and maintained backend services for transportation and feedlot management SaaS platforms serving 500+ active users.
- Designed and implemented REST APIs with JWT authentication, role-based access control, pagination, filtering, and structured error handling.
- Improved API and database performance by optimizing SQL queries, indexes, EF Core queries, and execution plans.
- Built background job workflows using Hangfire for retries, notifications, scheduled processing, and async operational tasks.
- Worked on multi-tenant backend patterns including tenant-aware data access and domain-isolated service logic.
- Implemented structured logging using Serilog and production monitoring using Azure Application Insights.
- Added unit and integration tests for backend workflows to improve reliability and reduce regression risk.
- Contributed to Dockerized deployments and Azure DevOps CI/CD pipelines for automated testing and controlled releases.
- Collaborated with frontend/mobile teams to define API contracts, debug integration issues, and improve end-to-end product reliability.

Selected Projects

Feedlot Manager — Agricultural SaaS Platform

ASP.NET Core, EF Core, PostgreSQL, Azure

- Contributed to backend services for a multi-tenant agricultural SaaS platform with domain-specific modules and operational workflows.
- Worked on tenant-aware backend logic, database isolation patterns, and API flows supporting web and mobile clients.
- Implemented domain APIs, validation logic, structured responses, and backend workflows for production modules.
- Improved backend maintainability by following clean architecture, service-layer separation, and reusable repository patterns.

Roll On Dispatch — Logistics Platform

ASP.NET Core, SQL Server, React Native

- Developed backend APIs supporting logistics workflows such as shipments, drivers, carrier operations, and mobile synchronization.
- Implemented secure authentication and authorization flows for protected operational features.
- Supported offline synchronization scenarios with transactional consistency and careful API response design.
- Standardized backend patterns using controller-service-repository structure to reduce repeated boilerplate.
- Contributed to CI/CD automation and deployment validation using Azure DevOps pipelines.

Education

B.Tech, Computer Science and Engineering

Rajasthan Technical University, Jaipur

2020 – 2024

CGPA: 9.6/10
