Professional Summary

React-first Full Stack Engineer with 2+ years of experience building scalable SaaS applications using **React 18, TypeScript, Redux Toolkit, and ASP.NET Core**. Contributed to multi-tenant platforms serving 500+ active users across web and mobile. Experienced in end-to-end feature ownership — from UI architecture and performance optimization to backend API design, database tuning, authentication, and Azure-based CI/CD deployments. Strong focus on clean architecture, reusable components, and production reliability.

Experience

Full Stack Engineer — Feedlot Manager Platform

Remote

React 18, TypeScript, Redux Toolkit, ASP.NET Core, EF Core, Azure

2024 – Present

- Architected multi-module SPA with domain-isolated features and shared component library used across multiple dashboards.
- Implemented 70+ RTK Query slices enabling type-safe API integration, caching, and automated re-fetching strategies.
- Built reusable custom hooks and form abstractions reducing repetitive UI logic by 35%.
- Optimized large data grids using memoization, virtualization, and lazy-loading to improve rendering performance.
- Designed secure REST APIs with JWT authentication, role-based authorization, and structured error handling.
- Engineered multi-tenant backend with database-per-tenant isolation and background job processing.
- Improved database performance by 30% via indexing, query tuning, and EF Core execution plan optimization.
- Integrated Azure monitoring and logging (Application Insights, Serilog) for production observability.
- Contributed to CI/CD pipelines for automated testing, linting, and staged deployments.

Full Stack Engineer — Roll On Dispatch Platform

Remote

React 18, TypeScript, Google Maps API, ASP.NET Core, SQL Server

2024 – Present

- Developed logistics web platform including shipment builder, load board, driver management, and carrier workflows.
- Integrated real-time route visualization with Google Maps API and dynamic status updates.
- Implemented protected routes, token refresh mechanisms, and authentication-aware UI flows.
- Designed backend APIs processing 1000+ shipments/month with transactional consistency and offline sync support.
- Standardized controller-service-repository architecture, reducing backend boilerplate by 40%.
- Handled concurrency scenarios, background job retries, and async workflows to prevent data inconsistency.
- Collaborated closely with QA and product teams to deliver production-ready features across releases.

Mobile Engineer — React Native Applications

Remote

React Native, TypeScript, Redux Toolkit, Firebase

2024 – Present

- Built cross-platform driver and iPad applications with real-time GPS tracking and offline-first capabilities.
- Integrated push notifications (FCM/APNS), secure token storage, document scanning, and device APIs.
- Maintained shared API contracts between web and mobile clients to ensure consistent data flows.
- Applied clean architecture patterns to separate presentation, domain, and data layers.

Technical Skills

- **Frontend:** React 18, TypeScript, Redux Toolkit, RTK Query, React Router v6, AG Grid, Chart.js, FullCalendar, i18next
- **Mobile:** React Native, React Navigation, Firebase, APNS, Offline Sync
- **Backend:** ASP.NET Core, .NET 8, EF Core, REST APIs, JWT Authentication, LINQ, Hangfire
- **Database:** SQL Server, PostgreSQL, Query Optimization, Indexing
- **Architecture:** Clean Architecture, SOLID, Modular Monolith, Multi-Tenant SaaS Design
- **DevOps:** Azure DevOps Pipelines, Docker, Azure Static Web Apps, CI/CD Automation
- **Testing:** Vitest, Jest, React Testing Library, xUnit, Integration Testing
- **Tooling:** Git, npm, ESLint, Prettier, Swagger Codegen

Education

Bachelor of Technology — Computer Science

Rajasthan Technical University, Jaipur

2020 – 2024

CGPA: 9.6/10
